Sky and TELESCOPE

INDEX

To Volume II

This index to Volume II of "Sky and Telescope" has been arranged to be as useful as possible as a reference guide to the issues. Title, author, and subject references will be found. Authors' names are in italics, and major articles are distinguished from subject references by initial capital letters and the inclusion of the author's name in the reference.

In each case the first number given refers to the whole number of the issue; the second number, to the page.

All books which have been reviewed are listed only under the heading, Books and the Sky.

References followed by (ill.) indicate that the material is chiefly or entirely photographic. Other illustrative material needed may be found by referring to major articles on the subject.

Where a major article appears under a subject head, no attempt has been made to index the smaller parts of the subject covered by the article. Many such articles will be found to contain complete discussions.
